

# THORLO<sup>®</sup> TECHNOLOGIES

## THOR•LON<sup>®</sup> ACRYLIC

THOR•LON<sup>®</sup> acrylic yarns are exclusively developed for our THORLO construction. Perspiration trapped in the shoe environment tends to flatten or crush common acrylic yarns. THOR•LON is specially spun to maintain both softness and resilience, which maximizes foot comfort, blister protection and product durability.

## THOR•WICK<sup>®</sup> COOLING

Exclusive Thor-wick Cooling fibers are designed to enhance wicking to maintain a cool and dry environment for feet to prevent blistering and hot spots.

## NANOGLIDE™ FIBERS

Engineered to provide maximum wicking power, durability and friction reduction so that skin stays cool and socks dry fast, to prevent blisters contributing to overall comfort and heel as well as exceptional durability.

## TECH-GRIP

An ultra-fine polyester nanofiber, is slip resistant and comfortable while gentle on the skin. The frictional resistance of the yarn increases as moisture increases.

## THOR•WICK<sup>®</sup> WARM

THOR•WICK<sup>®</sup> WARM is a blend of multi-channel wicking and hollow-core insulating fibers making it ideal for moisture management, better temperature regulation and insulation from the cold. The result is more comfort, foot protection and a better experience for the skier or rider.

## THERMOLITE<sup>®</sup> ECOMADE FIBER

Designed to provide lightweight warmth, keeping you warm when it's cool and cool and dry when it's warm, offers excellent wicking and insulation properties while being made from recycled materials.

## ROCKET GRIP

A special silicone performance grip yarn that adheres to the skin preventing the sliding of the sock into the shoe. The grip fibers hold the foot to the sock and the sock the shoe, fusing the foot to the shoe for a no movement fit. Perform your best with Rocket Grip.

## IONIC+

A silver based topical finish to eliminate and fight odors.

## WHY THORLO?

THORLO padding is backed with clinical data that shows the effectiveness of the padding. The difference is in the padding with four choices of cushioning density:

**MAXIMUM PADDING** is a high density engineered pad for ultimate protection  
(for individuals who often have ongoing foot issues during and after activity)

**MODERATE PADDING** is a medium density engineered pad for maximum protection  
(for individuals who sometimes encounter some foot issues during or after activity)

**LITE PADDING** is a light density engineered pad for moderate protection  
(for individuals with little to no foot issues)

**ULTRA LIGHT PADDING** is an ultra light density engineered pad for minimal protection  
(for individuals with no foot issues)

**PADDING-FREE** offers a sleek fit with no padding for maximum breathability.

THORLO socks are engineered to be activity specific with specific padding and differentiated levels of padding in the areas where the friction forces are at their worst, unique to each activity.

THORLO's exclusive blend of fibers wick sweat away from your feet, but do not absorb or retain moisture, pushing sweat to the outside of the sock. THORLO terry loops remain aloft to protect feet against blisters and pain.

THORLO socks are more durable. Made with synthetic fibers and knitting construction with special plaiting in the padding makes the socks last longer. Using exclusive and proprietary yarn blends to wick moisture away ensures a protective environment for your feet.

"Engineered for excellence, worn for years..."

Made in  
the USA

# SIZE CHART PAGE

At THORLO, we've always believed that every detail matters, especially when it comes to the fit of a sock. While other brands might rely on a one-size-fits-all approach, we've taken a different path—one that is focused on the individual and their specific needs. From the very beginning, we've been dedicated to creating socks that don't just fit, but truly perform.

In the 1980s, our socks were designed with maximum cushioning for comfort. But as the athletic shoe industry evolved, shoes became lighter and more form-fitting, we evolved also, developing socks that fit perfectly with the new generation of shoes. This change resulted in a different size chart.

Through research and collaboration with experts, we also discovered that men's and women's feet are different in key ways. This led us to create women-specific socks that addressed these differences, providing a better fit and support. This also meant a different size chart.

While other brands may stick to one size chart for everything, we invest the time and effort to ensure that every THORLO sock offers the right fit, protection, and performance. It's a bit more work for us, but we believe it's worth it to provide our customers with the absolute best. After all, at THORLO, we don't just make socks—we make serious socks for serious performance.
